

iPhone Mock-ups

Introduction

These mock-ups are for the iPhone version of the note taking application.

The focus for these mock-ups were tasks related to listening to recordings, taking notes and reviewing notes.

The goal was to explore and experiment with different design ideas and interaction methods some of which will be developed further during the prototype project.

They were designed for an iPhone 5s but should work for a smaller iPhone with some tweaks.

How to use these mock-ups

This PDF has clickable hot spots on some buttons and links. You can navigate these mock-ups using these clickable hot spots.

Start

Reflections and Insights

1. Player with gesture control

I really like the player design with just one big gesture controller. It is very clean and simple while offering a lot of control. My only concern would be that it might be harder to learn and remember for many users. Also it might cause issues for users who are totally blind. Even though the application is not designed for the totally blind I would like it to work for them if possible.

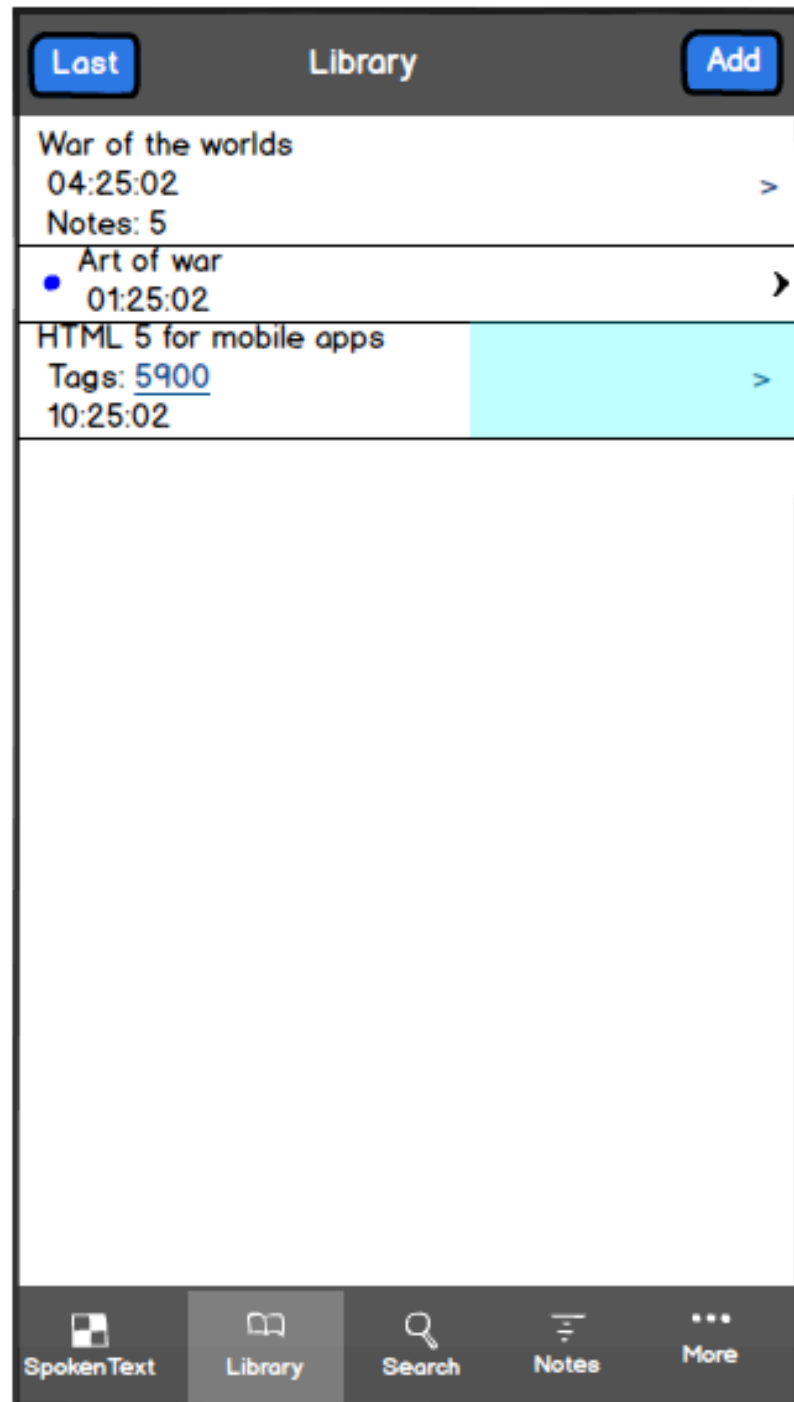

What might be useful is to offer two versions of the player interface and let users pick the one they prefer in the settings section of the application. An in-app help system might also aid users in learning how to use the various player interfaces.

2. Removal of secondary play / pause button

While testing the iPad designs on my iPad and looking at the audio player in iOS 7 using Safari, it came to me that, with the default player having a larger play / pause button (which is new in iOS 7) I did not need a secondary play / pause button on the player page.

I think the removal of this button makes the design cleaner and simpler. And it is also very easy to tap on the gesture controller to play / pause. If you don't want to tap on the smaller play/pause button on the default audio player provided by iOS

Library Tab

Library Tab

This tab lists all the files you have downloaded to your device.

Add

This lets you download a file from Spokentext to the phone

Last

Plays the last played file

Tapping a row loads the recording in the player

Blue circle: means a new recording

Green bar show how much a file has been listened too

Tag: click the tag link to see all items associated to that tag

Rows only show extra data about notes and tags if they exist for that recording

Mock-up notes

Each one of the items in the list shown on this page takes you to a different version of the player. If viewing the PDF file click a list item to see a different vision for the player interface.

Tags

A tag can related to recordings, notes or both.

The goal with tags is to let users organize note and recordigns around subjects, topics or themes.

Edit BUtton

Wil show a delete icon for each row so that you can deleted a tag

Tapping a row shows you all the recordings and notes associated to that tag

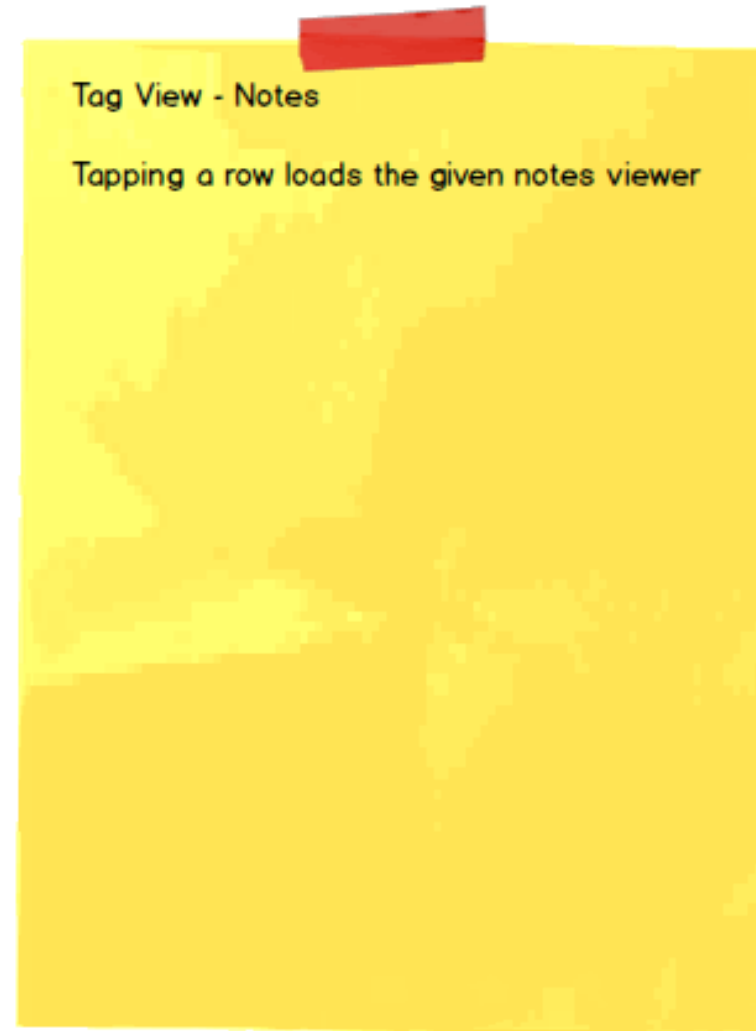

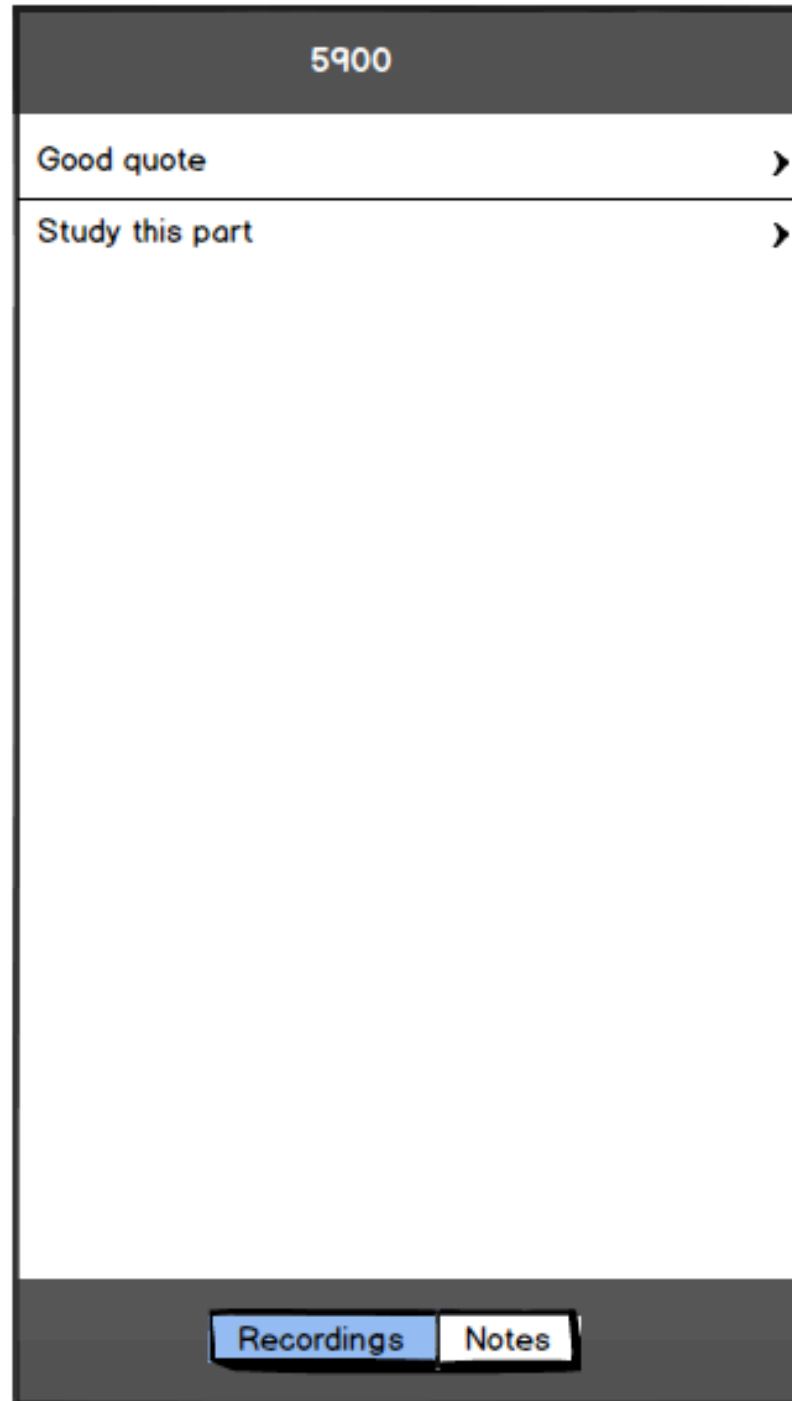

A screenshot of a mobile application interface. At the top, there is a dark grey header bar with the text "5900" in white. Below the header is a white list area containing two items: "HTML 5 for mobile apps" and "Mobile App Design for iPhone". Each item has a right-pointing chevron icon. At the bottom of the screen is a dark grey navigation bar with two buttons: "Recordings" (highlighted in blue) and "Notes" (white with a black border).

Recording - Player

Initial Design

Top row of buttons

back: takes you back to the library or spokentext tab

player: shows this page

options: show options for this recording

notes: lists all notes for this recording

New note icon: lets you take a new note

Clip buttons

in: sets a clip in point

Save: Shows you the clip note save screen

Play: Plays the clip

Out: Sets a clip out point

The In and Out buttons turn green once they have been tapped.

Blue Swipe button

This control responds to one finger swipe gestures. See table below

Bottom button bar

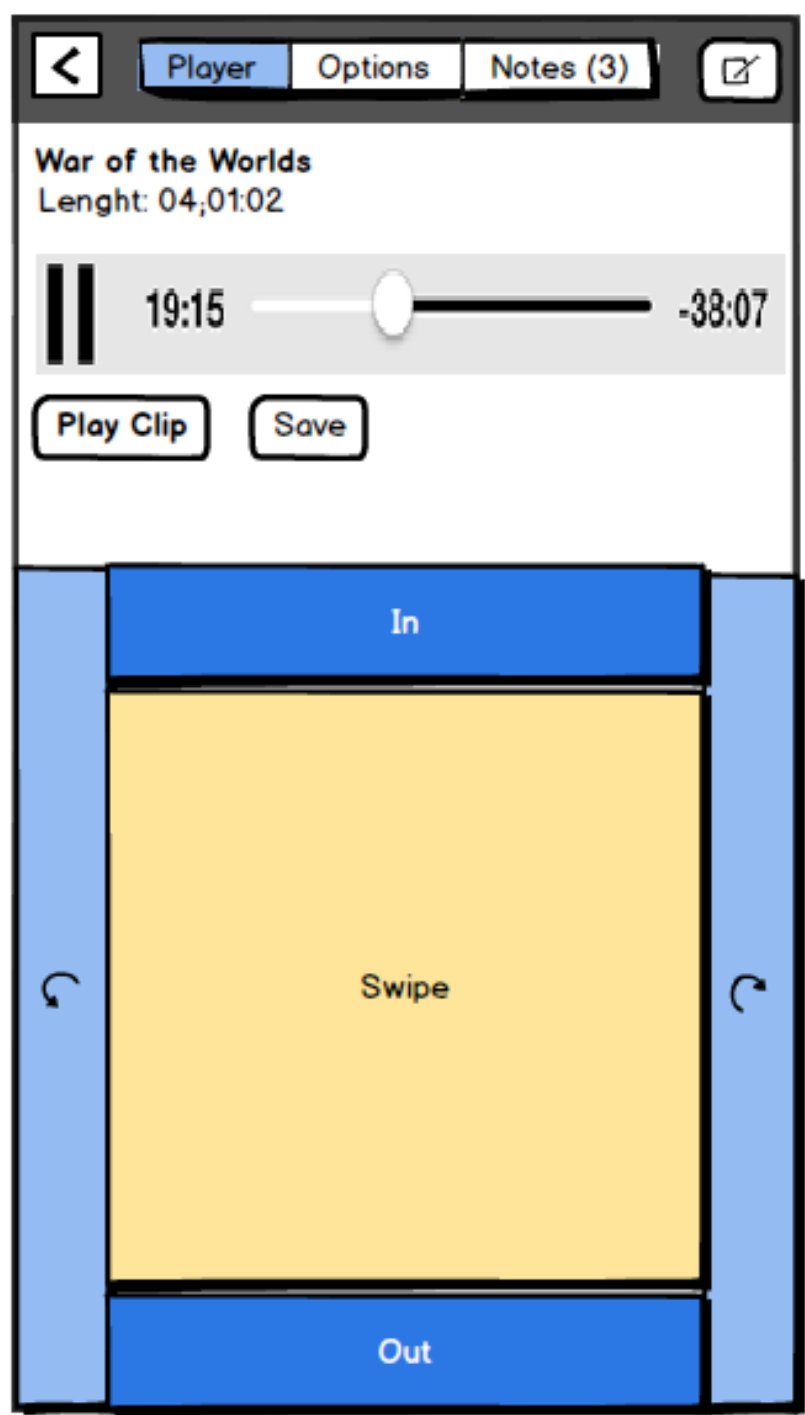

Rewind 15 seconds

Play / Pause button

Fast Forward 15 seconds

One Fingure Swipe	Action
left	rewind
right	fast forward
top	play / pause toggle
down and to the right	mark in point for clip
down and to the left	mark out point for clip

Recording - Player - with big integrated button

Directed Study
ECIN 5990 - Winter 2014
SCHOOL OF INFORMATION TECHNOLOGY

Professor
Steve A. Tapp, PhD
Carleton University Dept of Psychology
Ottawa, ON
Steve.Tapp@carleton.ca

Student
Mark McKay
markmckay@carleton.ca

Objective
Explain the interaction design challenges of designing a system for the visually impaired which will let users highlight and mark-up audio files just like people mark-up printed documents during studying and review.

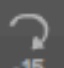

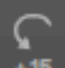

Project
Research, design and prototype a note-taking mobile application for visually impaired people which will let users highlight and mark-up audio files just like people mark-up printed documents during studying and review.

The design will support the taking of text, audio, video and image notes along with a process to mark-up sections of audio similar to how a signed person would highlight a portion of text.

Evaluation

- Annotated bibliography of references (30% of total)
 - o Target Date: January 31, 2014
 - o The Annotated Bibliography will include a list of relevant references (i.e. APA format) accompanied by a sentence summarizing each.
- Design spec/mark-up: 25 %
 - o Target Date: February 28, 2014
 - o The design spec/mark-up will demonstrate and explore a possible mobile phone and tablet design solution.
- Development of prototype: 20 %
 - o Target Date: April 1, 2014
